

HEALTH INFORMATION MANAGEMENT, MINOR

Health information is changing our health and health care delivery. Saint Louis University's health information management minor introduces the management of the important asset of health information and can complement the major of any SLU student interested in health care.

As health care becomes more information intensive, the ability to manage, understand and use data will be an increasingly valuable skillset. Courses focus on the use of health data as a critical and valuable asset.

Requirements

Students minoring in health information management at SLU will take the following courses.
